

trg tech mentorship programme

We consider it our responsibility to educate and guide today's thriving, tech-savvy students so that they may develop into tomorrow's confident go-getters.

The Mentorship programme is a platform designed specifically to provide guidance and direction to top students during their final year projects. Our aim is to have students design and implement truly innovative projects. We also use this platform to provide counselling/advice on career building skills. We realise that many students are at the brink of making career-defining choices and at this stage, seldom have enough relevant information to make these decisions. Our mentors can provide valuable insight into how the industry really functions and what options can actually be available to these students.

trg tech: playing mind games
(of the intelligent kind)

eligibility
